Meal 9

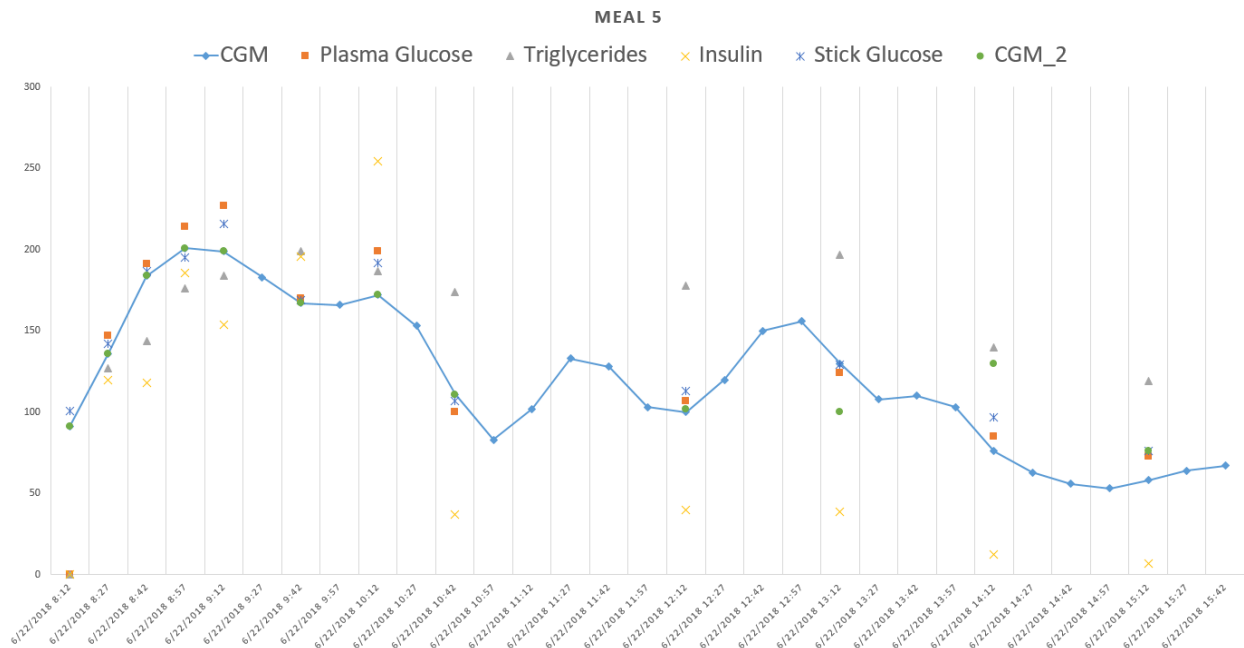

Visualization of all patients' standard meals

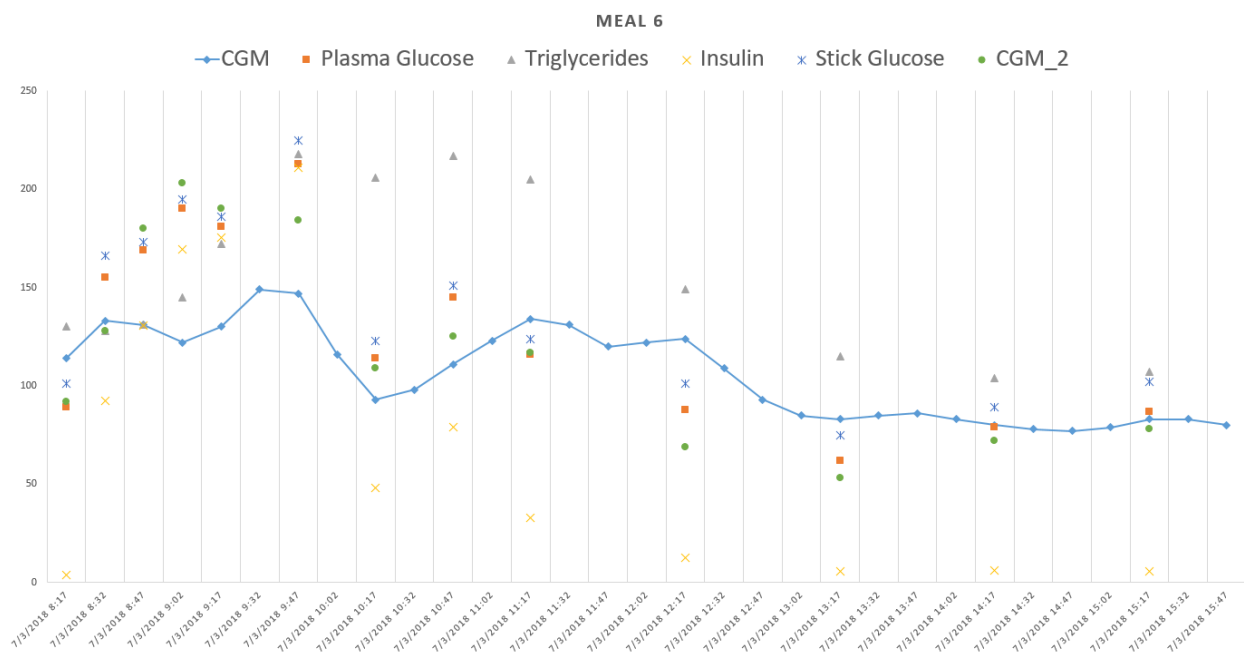

38A:

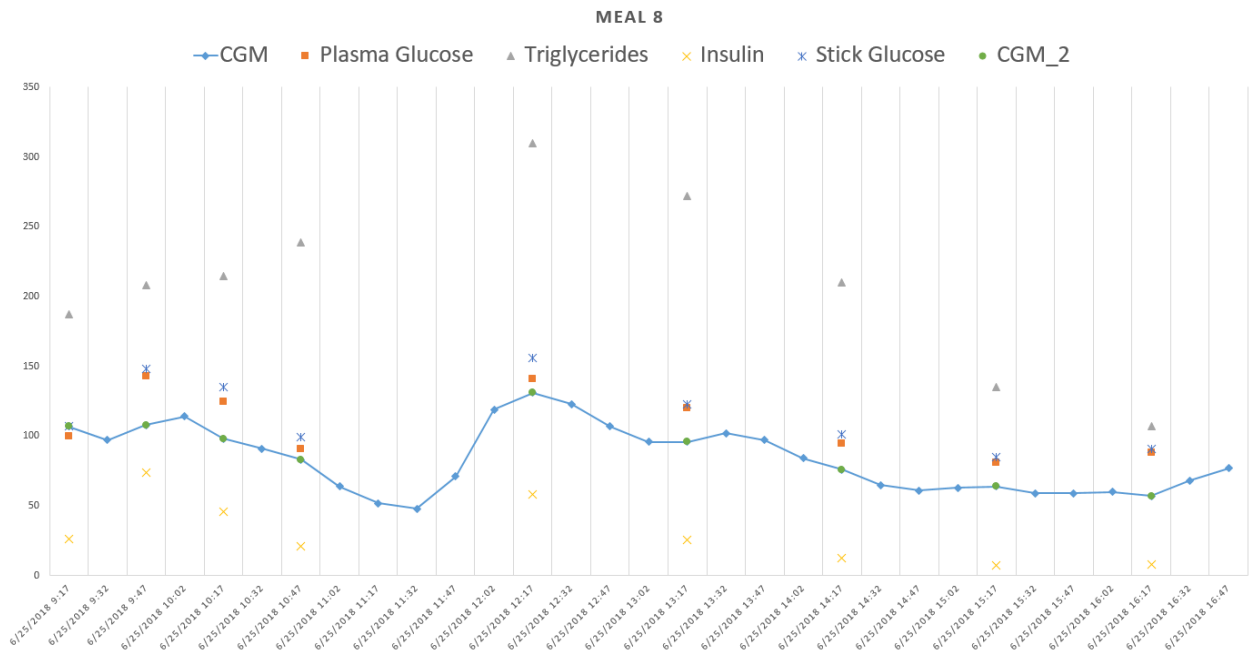

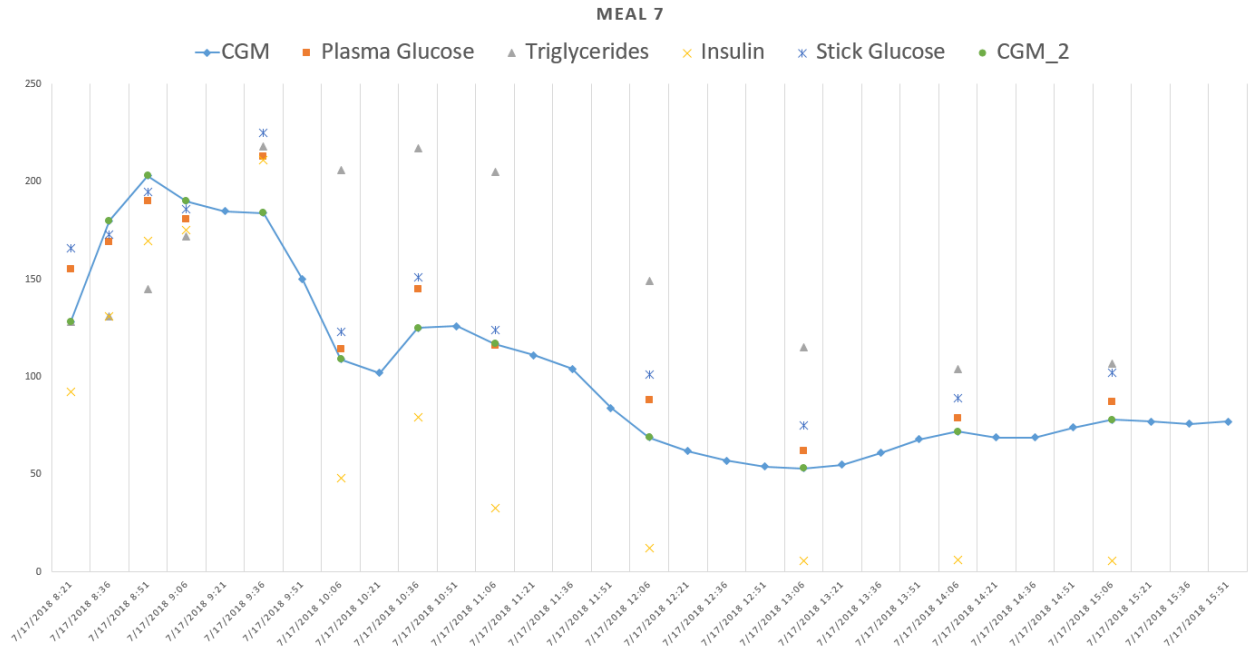

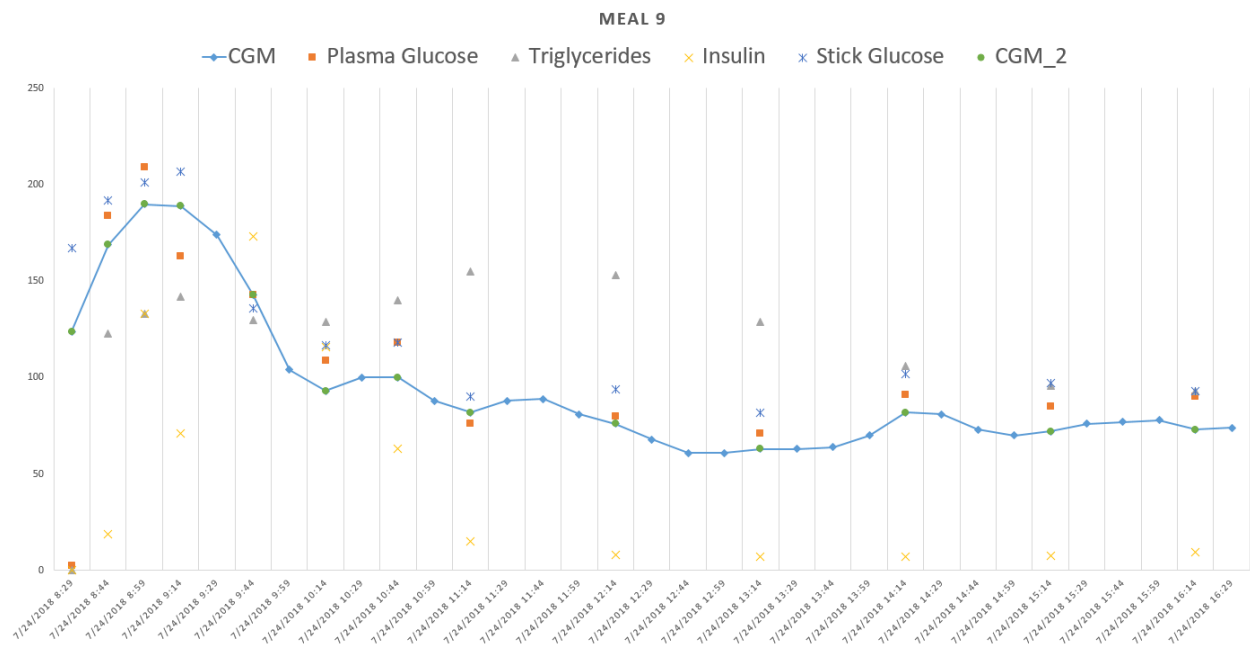

Notice the last few green dots (CGM_2, cgm reading from blood draw file) don't align with CGM (read from raw cgm txt file)

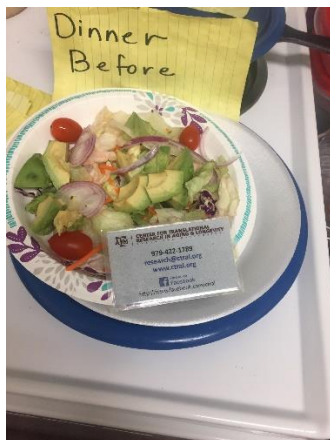

This one starts from the beginning, no alignment between those two CGM readings

Notice this one, the blood draw wasn't spaced the same as before. It starts off by 30 mins, and then 1 hour

Problem of this one, at 3:35pm it has food picture

Problem 1: more than 1 spike in standard meal

Problem 2: time delay of 1st cgm reading from the shake
